

Enhancing proxy security with specific TLS settings *TLS SETTINGS.*

STRATEGY
Teardown

The latest n8n update prioritizes tailored TLS options for each hop, shielding data as it navigates through proxies.

SWIPE →

VERSION UPDATE

n8n@2.34.5 applies TLS options per hop *PER HOP.*

This update brings crucial security enhancements for workflows involving proxy servers.

Each hop now benefits from unique TLS configurations, offering seamless security across proxy transmissions.

SWIPE →

Multi-Hop

TLS
UPDATE

**This release ensures
TLS is configured per hop *PER HOP*.**

Gain confidence in your data's journey through multiple proxy levels
with individualized TLS settings.

SWIPE →

DATA PROTECTION

Imagine n8n workflows relying on multiple proxies *MULTIPLE PROXIES.*

Ensure secure data transmission with TLS protecting each step of the way.

For workflows needing diverse proxy setups, individualized TLS settings fortify each transition.

SWIPE →

Risky

ENTRY
RISK

**Previously, TLS was
applied only at entry *AT ENTRY.***

Without per-hop TLS, subsequent stages were vulnerable to security gaps, risking data exposure.

SWIPE →

Check Now

Check if your proxies enforce TLS per hop *PER HOP*.

Ensure each proxy in your workflow is set to utilize the new TLS per hop feature of n8n@2.34.5.

Configuration verification is vital for maintaining the highest level of data security throughout.
